**DISCUSSION:**

The Site Inspection and Prioritization (SIP) report for National Chemical Company - Plant No. 5 was completed and reviewed by the Site Assessment Manager. The facility manufactured alkyl lead components used as anti-knock additives in fuels. The site is a RCRA facility designated as an Environmental Priority Initiative (EPI) site. The site is being deferred to the RCRA program for further investigative action, as per their request and current CERCLA guidance.

A decision of "No Further Remedial Action Planned" (NFRAP) under Superfund will be entered in CERCLIS, and the site will be referred to the State. The site is also a candidate to be archived from the CERCLIS database.

Based upon currently available information, this site fails to meet the minimum criteria required to be included, or proposed, at this time on the NPL by the EPA. The NPL is EPA's list of sites that are priorities for further investigation and, if necessary, response action under CERCLA, 42 USC 960001, et seq. Other actions may be appropriate under State Authorities.
